

# SR carrying handle

# SRH

## Description

SRH is a carrying handle which makes it substantially easier to manually move circular ventilation ducts at the building site.

The handle fit ducts  $\varnothing$  315–1250, but it is adequate to limit its use to the sizes  $\varnothing$  400–800. You ought not to exceed the recommended maximum carrying weight of 25 kg per person.

One person at each duct end uses a handle each.

Weight: 2,0 kg

## Advantages

- Connects and disconnects in a moment.
- Provides a superior better and more secure grip compared to hold directly on to the duct.
- Can be gripped with one or two hands.
- Can be held on the shoulder to relieve the load on the arms.
- Eliminates the risk of hitting the legs to the edge of the duct and makes it possible to walk with "normal" step length.
- Gives a much better all-around-view and in particular you can see where you put your feet.
